Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

    New antibody to human collapsin - used to inhibit the activity
PT
of
PT
       collapsin, to induce neurite out-growth and to treat
individuals with
PT
    nerve damage.
    Claim 2; Columns 15-18; 11pp; English.
PS
    An antibody capable of specifically binding at least a portion
CC
of
     the collapsin protein can be used to purify human collapsin
CC
and
CC
     to inhibit the activity of the protein.
                                             It can be used to
induce
CC
    neurite outgrowth by neuronal cells and to treat individuals
CC
    suffering from nerve damage.

PT
     A process for producing a polypeptide with apolipoproteinase
PT
     activity - by cloning a DNA sequence coding for a protein
with
PT
    serum opacity factor activity and isolating said polypeptide.
PS
     Claim 8; Fig 4A-C; 46pp; English.
     SOF22 (serum opacity factor 22) is encoded by the sof22 gene
CC
(083181)
    from Streptococcus strain D734 and flanking regions. SOF22 has
CC
      apolipoproteinase activity, cleaving apolipoprotein APO-1,
CC
from high
    density lipoprotein (HDL). Cleavage of APO-1 from HDL leads to
CC
CC
    coaquiation of the remaining fraction resulting in opalesence.
This
CC
    observation is a useful tool for qualitatively determining the
CC
     concentration of HDL in mammalian sera, low levels of which
contribute
CC
     to coronary heart disease.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

DR
PT
     New class of semaphorin peptide(s) and polypeptide(s) - are
PT
     potent modulators of nerve cell growth and regeneration
PS
     Example 2; Page 74-77; 101pp; English.
CC
    The sequence of the Drosophila semaphorin I protein. The gene
was
CC
      isolated by PCR using primers based on sequence homology
between the
    complete grasshopper and partial Tribolium and Manduca (moth)
CC
semaphorin
     gene sequences. The products gave two different sequences,
CC
each of which
CC
       was used to obtain its respective complete sequence:
semaphorin I and II
     (Q87445). The proteins encoded by the grasshopper semaphorin
I (Q87441),
    human semaphorin III (Q87442), vaccinia virus semaphorin IV,
Drosophila
      semaphorin I and II, Tribolium semaphorin I (Q87446) or
variola major
CC
     (smallpox) virus semaphorin IV (Q87447) genes were used to
generate a
     series of peptides (R70370-R70418), which retain semaphorin
CC
receptor
      binding activity. The semaphorin derived or semaphorin
CC
receptor derived
    peptides are potent modulators of nerve cell growth, immune
CC
CC
     responsiveness and viral pathogenesis. They can be used in
diagnosis and
      treatment of neurological disease and neuro-regeneration,
CC
immune
       modulation and diagnosis and treatment of viral and
CC
oncological infection
CC
    and diseases.

DR
    New class of semaphorin peptide(s) and polypeptide(s) - are
PT
    potent modulators of nerve cell growth and regeneration
PT
PS
    Example 2; Page 79-82; 101pp; English.
     The sequence of the Drosophila semaphorin II protein.
                                                             The
CC
gene was
      isolated by PCR using primers based on sequence homology
CC
between the
    complete grasshopper and partial Tribolium and Manduca (moth)
CC
semaphorin
     gene sequences. The products gave two different sequences,
CC
each of which
       was used to obtain its respective complete sequence:
semaphorin I
                        The proteins encoded by the grasshopper
      (087444) and II.
CC
semaphorin I
      (Q87441), human semaphorin III (Q87442), vaccinia virus
semaphorin IV,
      Drosophila semaphorin I and II, Tribolium semaphorin I
(Q87446) or
     variola major (smallpox) virus semaphorin IV (Q87447) genes
CC
were used to
     generate a series of peptides (R70370-R70418), which retain
CC
semaphorin
       receptor binding activity. The semaphorin derived or
semaphorin receptor
    derived peptides are potent modulators of nerve cell growth,
CC
immune
     responsiveness and viral pathogenesis. They can be used in
CC
diagnosis and
     treatment of neurological disease and neuro-regeneration,
CC
immune
       modulation and diagnosis and treatment of viral and
oncological infection
CC
     and diseases.

PT
    New class of semaphorin peptide(s) and polypeptide(s) - are
    potent modulators of nerve cell growth and regeneration
PT
PS
    Example 2; Page 90-91; 101pp; English.
    The sequence of the variola major (smallpox) virus semaphorin
CC
IV protein.
    The gene sequence was isolated as the A43R open reading frame
CC
sequence
    from variola based on sequence homology searches of a database
CC
     grasshopper, Tribolium and Drosophila semaphorin sequences.
CC
The proteins
      encoded by the grasshopper semaphorin I (Q87441), human
semaphorin III
     (Q87442), vaccinia virus semaphorin IV (Q87443), Drosophila
CC
semaphorin I
    and II (Q87444-5), Tribolium semaphorin I (Q87446) or variola
major
     (smallpox) virus semaphorin IV genes were used to generate a
CC
series of
     peptides (R70370-R70418), which retain semaphorin receptor
CC
binding
                 The semaphorin derived or semaphorin receptor
CC
      activity.
derived peptides
       are potent modulators of nerve cell growth,
responsiveness and
      viral pathogenesis. They can be used in diagnosis and
treatment of
CC
    neurological disease and neuro-regeneration, immune modulation
and
    diagnosis and treatment of viral and oncological infection and
diseases.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.
